

The Order of the Athenaeum proudly presents the prestigious and renowned title of
Academician of the Year
to
Rutherford Woodcroft

Rutherford Woodcroft is an exceedingly dedicated man with an innumerable number of years honing his expertise and craft. Although he excels in all subject matter, ranging from history to magical abnormalities, Mr. Woodcroft's true expertise lies within the land he studies.

As a child, Mr. Woodcroft would frequently visit distant lands with his parents on their own research endeavors. His parents studied all aspects of the environment including man-made structures and their effect on the native flora, like ebodes and framing plots. When he became of school age, he quickly excelled past peers and developed highly-efficient studying habits to more aptly complete his work. Mr. Woodcroft's perseverance and determination made him an unequivocal candidate to join the Athenaeum at a very young age. After the Athenaeum became Mr. Woodcroft's alma mater, he set off on his research-based escapades to teach the future generations of scholars and disseminate his wisdom.

Throughout the year Mr. Woodcroft has shown outstanding dedication to his work and has provided significant breakthroughs through his revolutionary new discovery methods. In the last year alone, Mr. Woodcroft is credited with discoveries in the areas of the lost Taladorn Kingdom, Mineralogy and Geochronology. This new research method, which he refers to as framing plots, has been coined as the Woodcroft Method in tribute to his success. As part of this prestigious award, Mr. Woodcroft has decided to take on a new and exciting project that will take him to Port Elry. He believes this new frontier has a lot to offer society as a whole and seeks to venture forth teaching his exciting discovery method to any who would like to learn.
